Skills

- **Android:** Kotlin, Android SDK, Jetpack Compose, Material Design, Android Views, Navigation, ViewModel, Lifecycle, WorkManager.
- **Architecture:** Clean Architecture, SOLID, MVVM, MVI, MVP, modularization.
- **Async:** Kotlin Coroutines, RxJava.
- **Data & Networking:** Room, DataStore, Retrofit, OkHttp, GraphQL, REST APIs.
- **Dependency Injection:** Hilt, Dagger 2.
- **Testing:** JUnit, MockK/Mockito, Espresso, Kaspesso, Compose UI tests.
- **CI/CD:** CircleCI, AWS CodeBuild, Bash.
- **Backend & Cloud:** Node.js, GraphQL, MySQL, DynamoDB, AWS Lambda, S3, AWS CDK.
- **AI-Assisted Engineering:** Spec-driven development, agentic engineering workflows, Copilot CLI, Codex, Claude Code, Cursor, OpenClaw.

Certifications

- [AWS Cloud Essentials](#)
- [Getting Started with Deep Learning](#)

Languages

- English (Fluent) (both written & verbal)
- Ukrainian (Native)
- Spanish(A1)

Location

- València, Spain.

Profile

Senior Android Software Engineer with 5+ years of commercial experience in the point-of-sale system sector. Strong in Kotlin, Android architecture, hardware/payment integrations and backend technologies using AWS. Proven ability to build and maintain high-load, enterprise applications with a focus on stability, scalability, and optimized CI/CD pipelines. Dedicated to delivering solutions that drive business growth and operational efficiency.

Work Experience

HS-Soft

Android Software Engineer

JAN 2024 - PRESENT

- lead ongoing development and maintenance of Self-Order terminal and POS-related Android products, adapting solutions to changing customer and hardware requirements.
- Designed and implemented full-cycle functionality across Android and backend services using Node.js and GraphQL.
- Developed and maintained comprehensive software quality assurance processes for the CashAssist project, including creating end-to-end UI tests, instrumentation tests, and unit tests (JUnit) to ensure application stability and reliability.
- Integrated and passed certification for weighing solutions for Android register systems for Sunmi and DIBAL scales, covering hardware integration, protocol communication, documentation, and WELMEC compliance requirements.

HS-Soft

Lead Android Developer

Nov 2021 - Jan 2024

- Led Android development teams, coordinating stakeholders, delivery planning, technical reviews, and daily engineering activities..
- Developed Android solutions and libraries for EFT payment terminals, smart cards, printers, and peripheral devices using USB and TCP/IP communication.
- Drove major modernization initiatives including RxJava to Kotlin Coroutines, XML to Jetpack Compose, and MVP to MVI architecture
- Improved application performance, stability, and maintainability through refactoring, architecture enhancements, and technical leadership.

HS-Soft

Android Developer

Dec 2020 - Nov 2021

- Built and maintained Android features for POS and enterprise applications, delivering new functionality and resolving UI and business logic issues to improve reliability.
- Modernized application architecture and user experience through Material Design migrations and Firebase Cloud Messaging integration.

EDUCATION

- Polish-Japanese Academy of Information Technology (Warsaw) 2018-2020
- Drahomanov National Pedagogical University (Kyiv) 2020-2021
